Travel guidance platform, helps hundreds of millions of people each month become better travelers, from planning to booking to taking a trip. Travelers across the globe use the Wandering Earl site and app to discover where to stay, what to do and where to eat based on guidance from those who have been there before.*

Tech

Wandering Earl uses a number of HTML controls to work properly:

- [href] - creates a hyperlink to web pages, files, email addresses, locations.
- [a] - An anchor tag is a HTML element that creates a link to a target URL.
- [div] - The tag defines a division or a section in an HTML document.
- [table] - HTML tables allow web developers to arrange data into rows and columns.
- [img] - The tag is used to embed an image images are linked to web pages.
- [form] - The tag is used to create an HTML form for user input.
- [button] - defines a clickable button.

Installation

Wandering Earl website requires (<https://visualstudio.microsoft.com/>) to run.

Install the dependencies and devDependencies and start the server.
